Bonded Pac, the contract packaging division of 3PL Bonded Logistics, offers efficient and cost-competitive packaging and manufacturing solutions that help our clients gain expertise, increase flexibility, reduce costs and get to market quicker.

Our experienced Key Account Managers provide end-to-end project management to ensure customer-matched quality and attention to detail. We utilize the latest packaging software for production and inventory management, including lot traceability and expiry date control. When coupled with our value-added services like procurement and sourcing, distribution, and transportation, we become a single-source supply chain solutions provider.

"Anytime we have a project come up, I have absolutely no concerns about sending them to Bonded because I know the project is in good hands with your group. Your follow-up and attention to detail on everything has been superb."

– Project Manager with Fortune 500 apparel manufacturer

KITTING & ASSEMBLY

Kitting and assembly projects are easier with our experience and resources. Our flexible facility in Charlotte can handle production as well as storage of raw materials. A scalable workforce helps ensure small and large kitting and assembly projects are turned around quickly.

MULTI-PACKS & VARIETY PACKS

Multi-packs and variety packs create a wide range of benefits for your business. We offer various types of equipment to produce multi-packs and variety packs, including shrink bundlers, steam tunnels, and flow-wrappers. Our team of packaging professionals provide engineering, design, proto-types, and end-to-end project management.

RETAIL POP DISPLAYS

Companies rely on us to make their retail Point-of-Purchase displays come to life. Our Key Account Managers analyze your requirements to develop the most cost-efficient solutions so that your product arrives on-time in good shape at the lowest total landed cost.

DECORATIVE SHRINK SLEEVING

Decorative shrink sleeving helps to get your bottles and cans to stand out above the competition in the aisle or on the shelf. We house one of only a handful of automated contract shrink sleeve applicators in the Southeast at our Charlotte facility. We've invested heavily in steam because it provides the highest level of shrink quality for decorative sleeving.

REWORK

Customer-matched quality standards ensure our success with your rework and inspection projects. We work together with your team to incorporate your quality standards and testing procedures into our process. Access to a scalable labor pool helps us staff up for quick turnarounds to get your products to market.
